SOMError

This call generates error message and terminates process if fatal error.

Syntax

```
void (*SOMError) (int errorCode, string fileName, int lineNum);
```

Parameters

- errorCode (int) - input : Error code.
- fileName (string) - input : Name of source file where error was occurred.
- lineNum (int) - input : Line of source file where error occurred.

Return Code

None

Notes

SOMError is a global variable and can be replaced by user function

Example Code

```
#include <som.h>

SOMError(SOM_Fatal(12), __FILE__, __LINE__);
```
