

This is part of **Family API** which allow to create dual-os version of program runs under OS/2 and DOS

Note: This is legacy API call. It is recommended to use 32-bit equivalent

DosGetDateTime

This call gets the current date and time maintained by the operating system.

Syntax

`DosGetDateTime (DateTime)`

Parameters

`;DateTime (PDATETIME) - output : Address of the date and time structure: ::hours (UCHAR) - Current hour ::minutes (UCHAR) - Current minute ::seconds (UCHAR) - Current second ::hundredths (UCHAR) - Current hundredth of a second ::day (UCHAR) - Current day ::month (UCHAR) - Current month ::year (USHORT) - Current year ::timezone (SHORT) - Minutes west of UTC (Universal Time Coordinate) ::weekday (UCHAR) - Current day of the week. Sunday is 0.`

Return Code

`rc (USHORT) - return Return code description is: * 0 NO_ERROR`

Remarks

The `dayofweek` value is based on Sunday equal to zero. The value of `timezone` is the difference in minutes between the current time zone and UTC. This number is positive if it is earlier than UTC and negative if it is later than UTC. For Eastern Standard Time, this value is 300 (5 hours earlier than UTC).

If the application is executing in the OS/2 environment, it is more efficient to obtain these variables by calling `DosGetInfoSeg` instead of this function. However, applications written to the family API cannot depend on the availability of `DosGetInfoSeg`.

Example Code

C Binding

```
typedef struct _DATETIME { /* date */
    UCHAR hours;           /* current hour */
    UCHAR minutes;         /* current minute */
    UCHAR seconds;         /* current second */
    UCHAR hundredths;     /* current hundredths of a second */
    UCHAR day;             /* current day */
    UCHAR month;           /* current month */
    USHORT year;            /* current year */
    SHORT timezone;        /* minutes of time west of UTC */
    UCHAR weekday;         /* current day of week */
} DATETIME;

#define INCL_DOSDATETIME

USHORT rc = DosGetDateTime(DateTime);
PDATETIME DateTime;      /* Address of date/time structure (returned) */
USHORT rc;                /* return code */
```

This example gets the current time and date.

```
#define INCL_DOSDATETIME

DATETIME DateBuffer;
USHORT rc;

rc = DosGetDateTime(&DateBuffer);      /* Date/Time structure */
```

The following example obtains and prints date and time information. It then changes the system date to 5/10/1987 and prints the updated information.

```
#define INCL_DOSDATETIME
#include <os2.h>

main()
{
    DATETIME DateTime;          /* Structure to hold date/time info. */
    USHORT rc;

    rc = DosGetDateTime(&DateTime); /* Address of d/t structure */
    printf("Today is %d-%d-%d; the time is %d:%d\n",
          DateTime.month,
          DateTime.day, DateTime.year, DateTime.hours, DateTime.minutes);
    DateTime.day = 10;
    DateTime.month = 5;
    DateTime.year = 1987;
    printf("The new date is %d-%d-%d; the time is %d:%d\n",
          DateTime.month,
          DateTime.day, DateTime.year, DateTime.hours, DateTime.minutes);
    rc = DosSetDateTime(&DateTime); /* Address of d/t structure */
```

```
    printf("rc is %d\n", rc);
}
```

MASM Binding

```
DATETIME struc
    date_hours      db  ? ;current hour
    date_minutes    db  ? ;current minute
    date_seconds    db  ? ;current second
    date_hundredths db  ? ;current hundredths of a second
    date_day        db  ? ;current day
    date_month      db  ? ;current month
    date_year       dw  ? ;current year
    date_timezone   dw  ? ;minutes of time west of UTC
    date_weekday    db  ? ;current day of week
DATETIME ends

EXTRN DosGetDateTime:FAR
INCL_DOSDATETIME EQU 1

PUSH@ OTHER DateTime      ;Date/time structure (returned)
CALL  DosGetDateTime
```

Returns WORD
