

This is part of **Family API** which allow to create dual-os version of program runs under OS/2 and DOS

**Note:** This is legacy API call. It is recommended to use 32-bit equivalent

## DosSubAlloc

This call suballocates portions of a segment allocated by `DosAllocSeg` or `DosAllocShrSeg`, and initialized by `DosSubSet`.

### Syntax

`DosSubAlloc (SegSelector, BlockOffset, Size)`

### Parameters

`;SegSelector (SEL)` - input : Data segment selector that allocates the memory. `;BlockOffset (PUSHORT)` - output : Address of the allocated block offset. `;Size (USHORT)` - input : Memory block size requested in bytes.

### Return Code

`rc (USHORT)` - return Return code descriptions are: \* 0 `NO_ERROR` \* 311 `ERROR_DOSSUB_NOMEM` \* 313 `ERROR_DOSSUB_BADSIZE`

### Remarks

Before a segment allocated by `DosAllocSeg` or `DosAllocShrSeg` can be suballocated, it must first be initialized for suballocation by a call to `DosSubSet`.

Allocation size must be a multiple of four bytes. Otherwise, it is rounded up to a multiple of four bytes. The maximum value for the size parameter is the size that was set with `DosSubSet` minus 8. Note that no paragraph (16-byte) alignment is required; all requests are serviced on a byte alignment basis.

A suballocated block of memory in a suballocated segment is freed by a call to `DosSubFree`.

### Example Code

## C Binding

```
<PRE> #define INCL_DOSMEMMGR

USHORT rc = DosSubAlloc(SegSelector, BlockOffset, Size);

SEL SegSelector; /* Segment selector */ PUSHORT BlockOffset; /* Block Offset (returned) */ USHORT
Size; /* Size of requested block */

USHORT rc; /* return code */ </PRE>
```

## MASM Binding

```
<PRE> EXTRN DosSubAlloc:FAR INCL_DOSMEMMGR EQU 1

PUSH WORD SegSelector ;Segment selector PUSH@ WORD BlockOffset ;Block Offset (returned) PUSH
WORD Size ;Size of requested block CALL DosSubAlloc

Returns WORD </PRE>
```
