Note: This IBM PC BIOS API call is for DOS/Win16 personality only. Use Family API for portability.

Note: osFree Macro Library provides macros for most of functions

2022/03/13 05:41 · prokushev · 0 Comments

Int 13H, AH=05H

Version

IBM 5150 and higher

Brief

Format Track

Family API

none

Input

- AH = 05h
- AL = number of sectors to format
- CH = track number
- DH = head number
- DL = drive number
- ES:BX → address field buffer (see format)

Return

- CF set on error
- CF clear if successful
- AH = status (see status)

Macro

```
INCLUDE BIOS.INC

@DskFormat  0, 0, 0, offset buf
```

Notes

- on AT or higher, call AH=17h first
- the number of sectors per track is read from the diskette parameter table pointed at by INT 1E
- some old Compaq BIOSes have a bug when attempting to call this function from Windows Standard Mode with EMM386 loaded. A possible workaround is to call this function from Real Mode e.g. through DPMI function “Call Real Mode function with FAR return” (see INT 31/AX=0301h).

Note

Text based on Ralf Brown Interrupt List Release 61
