[Q]: Чем отличается eWorkPlace (eCS 1.1) от XWorkPlace?

[A]: Eugene Gorbunoff (2:5030/769)

Features present removed

General:

Icon replacements		X

Object page Has been merged with the "Icon" page.	X	

More system sounds	X	

Disable default menu items individually	X	

Folder features:

Configurable context menus via config folder	X	

Select by name	X	
Copy Filename	X	
Move "refresh now" to main context menu		X

Display "small icons" etc. in "View" submenu	X	

New "Create another" with positioning	X	

Folder status bars	X	
configurable codes (status bars page 2)		X

Folder content menus Will remain in XCenter object buttons however.		X

Quick-open folders		X

Full path in title	X	

Snap to grid		X

Folder hotkeys	X	

Display folder hotkeys in context menus	X	

Auto-scrolling of tree views (now enabled by default)	X	

Extended folder sorting	X	

```
        This is totally transparent to the user
        and isn't any more complicated than the
        standard folder sorting.
```

```
  Replacement folder refresh                    X
      Enabled by default.
```

```
  Folder default view override                  X
      (no longer make folders open in the
      same view as the parent)
```

```
  Folder default documents                                    X
```

```
  Replace "File exists"                         X
```

```
  Turbo folders                                               X
```

Disk features:

```
  Replace "drive not ready"                                   X
      Has been removed because people are still
      reporting problems with ZIP drives and such.
```

```
  Replace "Details" page                        X
```

Data file features:

```
  Extended associations                                       X
      Has been removed for now because I was unable
      to get a decent default setup ready in time.
      Will come back if I manage to do this before eCS 1.1.
```

```
  Replacement "File" page                       X
      Replaces three file pages into one.
```

```
  New second "File" page which lists EAs                      X
```

```
  File attributes in context menu               X
```

Desktop features

```
  Remove "Sort" and "Arrange" for desktop       X
      As opposed to all the other menu items,
      this should be disabled for the desktop
      per default. People hit "Sort" too
      easily for the desktop.
```

Program file features

```
  New settings pages "Module", "Resources" ...                X
```

```
        Most useful for programmers, I guess.
```

Hook features:

Pager (virtual desktops)	X	
Sliding focus		X

Sliding menus
    (I propose to leave this in to make
    menus behave like with Win95.)
	X	

Mouse button 3 features	X	
Auto-hide mouse		X
Move ptr to default button		X

Object hotkeys
    Win95 has this built in, so we should
    have this also.
	X	

XShutdown, restart Desktop X Shutdown folder X

Startup features:

Replacement startup folder		X
Desktop start logos		X
Extended archiving	X	
Enable NumLock on startup	X
