

Credits

osFree project does not aim to rewrite everything from scratch. We realize that our resources are limited. So, we must reuse existing code as much as possible. We have already taken a number of [FOSS](#) and Public domain software as a base of our [OS](#) components. Here is their list (may be, incomplete, sorry if it is).

Much thanks to those projects: (software or documentation)

- [Regina REXX](#) - our Classic REXX replacement
- [THE](#) - our TEDIT replacement
- And lot of other things from Mark Hessling. His products allowed us not to reinvent the wheel.
- [OS2Linux](#) project as a base for CPI implementation on top of Fiasco microkernel.
- [FreePM](#) project as base of PM reimplementaion
- [DROPS](#) as base of most Personality Neutral Servers.
- [L4Linux](#) as Linux personality core.
- [osFree/CMD](#) project as base for most of command line tools
- [FreeLDR](#) project which was evolved in full featured kernel loader.
- [GRUB](#) which was good codebase for [FreeLDR](#) project.
- [MCP](#) used as SOM CPP base.
- [GBM](#) used as core of Image Format I/O Procedures
- [JPGIO](#) used as core of Image Format I/O Procedures
- [ZLIB](#) used in many parts
- [LIBPNG](#) used in many parts
- [LIBJPEG](#) used in many parts
- [GDLIB](#) used in FreePM
- [LIBTIFF](#) used in many parts
- [Fiasco](#) reused as microkernel
- PParser from FPK used as UNI2H tool base
- TWIN library as win16 base
- [MINSTALL](#) by Martin Kiewitz
- [MMImage Pak](#) as Image File Format I/O Procedures
- [MMAudio Pak 2](#) as Audio File Format I/O Procedures
- [FreeDOS](#) parts as DOS subsystem base
- Ralf Brown documentation (Interrupt list). Great source of DOS and DOS VM information.

Many thanks to those projects:

Regina REXX - our Classic REXX replacement <http://regina-rexx.sourceforge.net/index.html>

THE - our TEDIT replacement <http://hessling-editor.sourceforge.net/index.html>

And lot of other things from Mark Hessling. His products allowed us not to reinvent the wheel.

OS2Linux project as a base for CPI implementation on top of Fiasco microkernel

FreePM project as base of PM reimplementaion

DROPS as base of most Personality Neutral Servers

L4Linux as Linux personality core

osFree/CMD project as base for most of command line tools

FreeLDR project which was evolved in full featured kernel loader

GRUB which was good codebase for FreeLDR project

MTDORB used as SOM CPP base

somFree used as SOM replacement base

GBM used as core of Image Format I/O Procedures

JPGIO used as core of Image Format I/O Procedures

ZLIB used in many parts

LIBPNG used in many parts

LIBJPEG used in many parts

GDLIB used in FreePM

LIBTIFF used in many parts

Fiasco reused as microkernel

PParser from FPK used as UNI2H tool base

TWIN library as win16 base

MINSTALL by KIEWITZ

MImage Pak as Image File Format I/O Procedures

MMAudio Pak 2 as Audio File Format I/O Procedures

FreeDos parts as DOS subsystem base

Ralf Brown documentation (Interrupt list). Great source of DOS and DOS VM information.

and other projects here. Please add it if we missed one.
