Command History Window

Command History Window Keys:

PgUp or **PgDn**	(from the command line) Open the command history window.
UpArrow⬆	Scroll the display up one line.
DownArrow⬇	Scroll the display down one line.
LeftArrow⬅	Scroll the display left 4 columns.
RightArrow➡	Scroll the display right 4 columns.
PgUp	(inside the window) Scroll the display up one page.
PgDn	(inside the window) Scroll the display down one page.
Ctrl-PgUp or **Home**	Go to the beginning of the history list.
Ctrl-PgDn or **End**	Go to the end of the history list.
Ctrl-D	Delete the selected line from the history list.
Enter	Execute the selected line.
Ctrl-Enter	Move the selected line to the command line for editing.

You can view the command history in a scrollable command history window, and select the command to modify or re-execute from those displayed in the window. To activate the command history window press **PgUp** or **PgDn** at the command line. A window will appear in the upper right corner of the screen, with the command you most recently executed marked with a highlight. (If you just finished re-executing a command from the history, then the next command in sequence will be highlighted.)

The display is not circular as it is at the prompt; it has a fixed beginning and end. The **Ctrl-D** (delete from history) key works within the history window as it does at the command line.

Once you have selected a command in the history window, press Enter to execute it immediately, or **Ctrl-Enter** to move the line to the prompt for editing (you cannot edit the line directly in the history window).

You can bring up a "filtered" history window by typing some characters on the command line, then pressing **PgUp** or **PgDn**. Only those commands matching the typed characters will be displayed in the window.

See Popup Windows for information on customizing window position, size, and color.
