Int 21H, AH=22H

Version

1 and higher

Brief

WRITE RANDOM RECORD TO FCB FILE

Family API

Input

```
AH = 22h
DS:DX -> opened FCB (see #01345)
Disk Transfer Area contains record to be written
```

Return

AL = status

```
00h successful
01h disk full
02h segment wrap in DTA
```

Notes

the record is written to the current file position as specified by the random record and record size fields of the FCB

the file position is not updated after writing the record

if the record is located beyond the end of the file, the file is extended but the intervening data remains uninitialized

if the record only partially fills a disk sector, it is copied to a DOS disk buffer to be written out to disk at a later time

not supported by MS Windows 3.0 DOSX.EXE DOS extender
