# Int 21H, AH=39H

## Version

2 and higher

## Brief

“MKDIR” - CREATE SUBDIRECTORY

## Family API

## Input

```
AH = 39h
DS:DX -> ASCIZ pathname
```

## Return

CF clear if successful

```
AX destroyed
CF set on error
AX = error code (03h,05h) (see #01680 at AH=59h/BX=0000h)
```

## Notes

all directories in the given path except the last must exist fails if the parent directory is the root and is full

DOS 2.x-3.3 allow the creation of a directory sufficiently deep that it is not possible to make that directory the current directory because the path would exceed 64 characters

under the FlashTek X-32 DOS extender, the pointer is in DS:EDX
