Int 21H, AH=44H, AL=06H

Version

2 and higher

Brief

GET INPUT STATUS

Family API

Input

```
AX = 4406h
BX = file handle
```

Return

CF clear if successful

```
    AL = input status
    00h not ready (device) or at EOF (file)
    FFh ready
    AH may be destroyed (refer to note)
CF set on error
    AX = error code (01h,05h,06h,0Dh) (see #01680 at AH=59h/BX=0000h)
```

Macro

Notes

files may not register as being at EOF if positioned there by AH=42h

under DOS 5.0, on a successful return, AH contains either the next character which will be read or 1Ah if at EOF; under a Windows95 DOS box, AH seems to be either unchanged or 00h

this function was not supported by Digital Research's DOS Plus

the CLOCK$ device under DR DOS 3.41 always indicates 'Ready'; this was corrected in v5.0
