

Note: This API call is for DOS and Win16 personality only. Use Family API for portability.

2018/09/07 05:04 · prokushev · 0 Comments

Int 21H, AH=5BH

Version

3 and higher

Brief

CREATE NEW FILE

Family API

Input

```
    AH = 5Bh
CX = file attribute (see #01420 at AX=4301h)
DS:DX -> ASCIZ filename
```

Return

```
CF clear if successful
    AX = file handle opened for read/write in compatibility mode
CF set on error
    AX = error code (03h,04h,05h,50h) (see #01680)
```

Notes

unlike AH=3Ch, this function will fail if the specified file exists rather than truncating it; this permits its use in creating semaphore files because it is an atomic “test and set” operation

under the FlashTek X-32 DOS extender, the filename pointer is in DS:EDX
