Int 21H, AH=65H, AL=05H

Version

3.3 and higher

Brief

get pointer to filename terminator table

Family API

Input

```
AH = 6505h
BX = code page (FFFFh=global code page) (see #01757)
DX = country ID (FFFFh=current country)
ES:DI -> country information buffer (see #01750)
CX = size of buffer (>= 5)
```

Return

```
 CF set on error
AX = error code (see #01680 at AH=59h/BX=0000h)
CF clear if successful
CX = size of country information returned
ES:DI -> country information (see #01750)
```

Macro

Notes

AL=05h appears to return same info for all countries and codepages; it has been documented for DOS 5+, but was undocumented in earlier versions. NLSFUNC must be installed to get info for countries other than the default.
