

This call sets the mode of the display.

Syntax

VioSetMode (ModeData, VioHandle)

Parameters

;ModeData (**PVIOMODEINFO**) - input : Address of the mode characteristics structure: ::length (USHORT) : Input parameter to VioSetMode. Length specifies the length of the data structure in bytes including Length itself. The minimum structure size required is 3 bytes. OS/2 sets to the first mode (in the list of modes supported by this display configuration) with a data structure matching the mode data specified. ::type (UCHAR): Mode characteristics bit mask: 'Bit Description' 7-4 Reserved, set to zero. 3 0 = VGA-compatible modes 0 thru 13H.

1 = Native mode.

2 0 = Enable color burst

1 = Disable color burst.

1 0 = Text mode.

1 = Graphics mode.

0 0 = Monochrome compatible mode.

1 = Other.

::numcolors (UCHAR): Number of colors defined as a power of 2. This is equivalent to the number of color bits that define the color, for example: 'Value Definition' 0 Monochrome modes 7, 7+, and F. 1 2 colors. 2 4 colors. 4 16 colors. 8 256 colors. ::textcols (USHORT): Number of text columns. ::textrows (USHORT): Number of text rows. ::pelcols (USHORT): Horizontal resolution, number of pel columns. ::pelrows (USHORT): Vertical resolution, number of pel rows. ::Attribute Format (UCHAR): Identifies the format of the attributes. ::Number of Attributes (UCHAR): Identifies the number of attributes in a character cell. ::Buffer Address (ULONG): 32-bit physical address of the physical display buffer for this mode. ::Buffer Length (ULONG): Length of the physical display buffer for this mode. ::Full Buffer Size (ULONG): Size of the buffer required for a full save of the physical display buffer for this mode. ::Partial Buffer Size (ULONG): Size of the buffer required for a partial (pop-up) save of the physical display buffer for this mode. ::Extended Data Area Address (PCH): Far address to an extended mode data structure or zero if none. The format of the extended mode data structure is determined by the device driver and is unknown to OS/2. ;VioHandle (HVIO) - input : Reserved word of 0s.

Return Code

rc (USHORT) - return Return code descriptions are: *0 NO_ERROR *355 ERROR_VIO_MODE *430

ERROR_VIO_ILLEGAL_DURING_POPUP *436 ERROR_VIO_INVALID_HANDLE *438
 ERROR_VIO_INVALID_LENGTH *439 ERROR_VIO_DETACHED *467 ERROR_VIO_FONT *468
 ERROR_VIO_UNSUPPORTED *494 ERROR_VIO_EXTENDED_SG

position and type.

VioSetMode does not clear the screen. To clear the screen, use one of the VioScrollxx calls.

The disable color burst bit in the type field in the VioSetMode data structure is functional only for the CGA and VGA. This bit causes the color portion of the video signal to be suppressed, producing a black and white mode on composite monitors attached to the CGA. On VGA, the bit causes the color lookup table to be loaded with values that produce shades of gray instead of colors, again producing a black and white mode. For both combinations of adapters and displays, the setting of this bit is recorded and returned on any subsequent VioGetMode call, but otherwise is ignored.

For text modes, the number of rows on the screen is determined by the availability of fonts of the correct size. For any specified mode, the size of the character defined by the font must be (Horizontal Resolution)/(Text Columns) dots wide and (Vertical Resolution)/(Text Rows) dots high. For example, an 8x8 font would support 39 through 43 text rows if the screen resolution were 640x350.

If VioSetState request type 6 has been issued previously to select the target display configuration for VioSetMode, the mode is set on the display configuration selected. If that display configuration does not support the mode specified, an error is returned.

Assuming no target display configuration for VioSetMode is selected, the mode is set on the primary configuration. If the primary configuration does not support the mode specified, the mode is set on the secondary configuration.

The table below shows the VioSetMode parameters required to set all the modes supported by the CGA, EGA, VGA, and PGZ Display Adapters. The modes native to the 8514/A and other advanced video adapters are set with the Adapter (programming) Interface to these adapters, not VioSetMode.

Note: Although graphics mode support is provided in VioSetMode, this support is not provided by the Base Video Handler provided with OS/2. { |class="wikitable"
