This is part of **Family API** which allow to create dual-os version of program runs under OS/2 and DOS

Note: This is legacy API call. It is recommended to use 32-bit equivalent

VioWrtCellStr

This call writes a string of character-attribute pairs (cells) to the display.

Syntax

```
VioWrtCellStr (CellStr, Length, Row, Column, VioHandle)
```

Parameters

- CellStr (PCH) - input : Address of the string of character-attribute(s) cells to be written.
- Length (USHORT) - input : Length, in bytes, of the string to be written. Each character-attribute(s) cell is 2 or 4 bytes.
- Row (USHORT) - input : Starting cursor row.
- Column (USHORT) - input : Starting cursor column.
- VioHandle (HVIO) - input : This must be zero unless the caller is a Presentation Manager application, in which case it must be the value returned by VioGetPs.

Return Code

rc (USHORT) - return

Return code descriptions are:

- 0 NO_ERROR
- 355 ERROR_VIO_MODE
- 358 ERROR_VIO_ROW
- 359 ERROR_VIO_COL
- 436 ERROR_VIO_INVALID_HANDLE
- 465 ERROR_VIO_DETACHED

Remarks

If a string write gets to the end of the line and is not complete, the string write continues at the beginning of the next line. If the write gets to the end of the screen, the write terminates.

PM Considerations

Write a character-attribute string to the Advanced VIO presentation space. The caller must specify the starting location on the presentation space where the string is to be written.

Bindings

C Binding

```c
#define INCL_VIO

USHORT  rc = VioWrtCellStr(CellStr, Length, Row, Column, VioHandle);

PCH             CellStr;        /* String to be written */
USHORT          Length;         /* Length of string */
USHORT          Row;            /* Starting row position for output */
USHORT          Column;         /* Starting column position for output */
HVIO            VioHandle;      /* Video handle */

USHORT          rc;             /* return code */
```

MASM Binding

```asm
EXTRN   VioWrtCellStr:FAR
INCL_VIO                EQU 1

PUSH@   OTHER   CellStr         ;String to be written
PUSH    WORD    Length          ;Length of string
PUSH    WORD    Row             ;Starting row position for output
PUSH    WORD    Column          ;Starting column position for output
PUSH    WORD    VioHandle       ;Video handle
CALL    VioWrtCellStr

Returns WORD
```
