

IFS Commands

An FSD is loaded and initialized at system start-up when an IFS= statement is encountered in CONFIG.SYS. The syntax of this command is as follows:

```
IFS=drive:path\name.ext parms
```

where drive:path\name.ext specifies the FSD to load and initialize. parms represents an FSD-defined string of initialization parameters.

See the OS/2 Version 2.0 Online Command Reference for a detailed description of this command.
