Cut

URL Resume v0.12

URL Resume is a simple command line HTTP file transfer utility that has the ability to resume a partially complete web download. For this to work the server must be HTTP 1.1 compatible (which many are these days).

Usage is very easy. Firstly, ensure that the part of the file that has already been downloaded is in the current directory. Then use the command:

urlresume full_url [-p proxy_url]

where full_url is the full URL of the file you're trying to get. The leading http: *can be omitted (only http URLs are supported). If the site is password protected, you can include your userid and password in the standard format, EG http://userid:password@www.securehost.com/doc.html This will cause urlresume to send an HTTP 'Basic' authorisation. A proxy can be specified using the -p switch. This will typically take the form: urlresume www.company.com/files/file.zip -p proxy.myisp.com:8080 Hint: if you originally tried the download from Netscape, right click the link and select 'Copy this Link Location' then paste the URL to the command line. URL Resume is not limited to continuing downloads. It is quite able to start a new transfer, allowing batched file transfers and other uses. Legal Stuff -+———— URL Resume is distributed as Freeware. This means that you are free to copy See http://silk.apana.org.au/utils.html for updates. Brian Havard === Cut === Практически отовсюду тянется и докачивается (вызовы в цикле на бобике) Скачанные файлы не трогает и не повторяет, OK? [A]: Aliaksandr Dzeshchanka (2:450/146) Есть целый вагон внешних приблуд для запуска GNU WGET, самая функциональная и пока что продолжающая писаться (середина марта 2001) - PM Download Center By Daniel Jorge Caetano (http://www.quasarbbs.com/daniel/) ■■■ Features - PM Shell interface. - Almost no CPU overhead. - When it detects one URL at the desktop or waiting directory it starts the download automaticaly. - Use the "Create URL Object" from Communicator to easily start your downloads. - Select the time between checks from 15s to 300s. - "Multithread". You can open several downloads at the same time. - Acts directly on WGet error message, to correctly take the proper action. - You can change the maximum number of downloads "on the fly". You can select from 1 to 16 downloads. - Correctly manages unexpected shutdown/power off/connection down or program abortions, so you can be sure your file WILL be fine. - Easy to configure. - Great 40×40 icons (32×32 version also present) - Enable/Disable all downloads with a click - Change all parameters (including WGet, directories, etc) on the fly. - Delete URLs easily - Freeze a URL for future download. - Stop a download, if you want to. - Change download order at any time. - Select between WGet being launched normaly or hidden. - Internet Connection Verify - Select between the program start shown or hidden - Select between "wide window" or "Small Window" WGet mode. - Download filters! - Now it supports directories with spaces (such as "Ambiente de Trabalho",*

on Brazilian-Portuguese version of OS/2. - Two directories to scan: the Virtual Destkop plus any other you wish. - Used URLs are optionally backuped in a repository folder. - URL Properties editable. - Optional Logging facility. - Desktop directory auto-detection. - No "phamtom" objects left on scan folders. - Cool configuration page. ■■■ Coming Soon Features... and limitations - Proxy Configuration - User Agent configuration for WGet - Name/Password logging for each URL - Capture "Link Click" of Netscape, so you'll be able to download just like you do with GetRight. (Not very soon) - Dran'n'Drop

(not very soon). - Mirror option (maybe never... maybe a new exclusive program. 😉 - Filters for local placement of files - Online Help - Timed start/stop of downloads. - Not working URLs folder (???) - Serach on ftpserach for another hosts for download. - Stripped downloads (the file is downloaded by 4 WGets at the same time (I think it's not possible using WGet, but maybe...) - URL on .HISTORY and not on .SUBJECT (need to contact WGet author) - Add option to use cURL as download program. - Make your suggestion. [A]: Vadim Priluzkiy (2:5030/301.28) PM - Downloader Понимает файлы больше 2Gb (на JFS), умеет работать через прокси, приятный и удобный интерфейс, управление черей пайпы, FAR-like регистрация для жителей xUSSR. Живёт по адресу: *http://eros2.by.ru*
