

[Q]: У меня RIVA128, SDD/2, почему нет 16bit цвета? Только 15bit или 32bit.

[A]: Aliaksandr Dzeshchanka (2:450/146)

Это глюк/фича видеокарты и её 2D-ускорителя.

From: stevew@scitechsoft.com Subj: Re: SDD for OS/2 question/wish/bug report?

NVIDIA RIVA128 videocard. If it's important it's PCI. My trouble is:
there is no videomodes x16bit (65535 colors) and x24bit (16M colors).
Only x15bit and x32bit. Switcher "Prefer 16bit modes" and "prefer

That card does not support acceleration in those color depths, which is why you can't select them. If you must use 16bpp, then you will have to use VBE mode (goption vbe on).

Если по-русски и в двух словах - карта не умеет эти режимы в Accelerated mode, переключайтесь в VBE-mode. Но там та-а-акие тормоза;(
