

[Q]: Как превратить обычный Windows 3.1 в Win-OS/2?

[A]: jari laaksonen

Если немного поколдовать:

Here are the files you need from Win-OS/2 to get Ms-Windows 3.1 to run under OS/2 2.1GA:

in \windows directory:

```
winos2.com  
winsheld.exe
```

in \windows\system directory:

```
mouse.drv  
os2gdi.exe  
os2k386.exe  
os2user.exe  
winsclip.dll  
winsdde.dll  
winsmsg.dll  
<video drivers, e.g. supervga.drv + swinvga.drv>
```

Add these lines into system.ini:

```
[boot] sdisplay.drv=swinvga.drv useos2shield=1 os2shield=winsheld.exe MAVDMApps=  
WAVDMAPPS=
```

(sdisplay.drv means seamless driver)

Only problem here is that from DOS boot you need to change the mouse.drv to the original because the win-os/2 version prevents Windows loading (and vice versa).
